## Install / Change SIM Card Instructions CellStat

### **Tools Required:**

1. Phillips screwdriver
2. Small, standard screwdriver

### **Procedure:**

1. Unscrew the four (4) corner screws on the metal top cover. Then, remove this cover.
2. Mounted to the bottom plate, underneath PC board will be the GSM Modem. Using your fingernail or a small wedging tool (e.g., a small screwdriver), pry off the SIM cover.
3. If you are changing an existing SIM, remove the card with tweezers or needle nose pliers.
4. Insert the SIM card into the holder. Observe diagram in modem slot for polarity. Verify that the SIM card fits into the holder properly and then replace the cover.
4. Once SIM Card is in place, reassemble the dialer following this procedure in reverse from procedure 1 above. Tighten only enough to compress the lock-washers at each point.

If you should need additional support, please contact **Microtel**.
